Summary

Senior DevOps Engineer with over 17 years of experience in the IT industry, specializing in bridging the gap between complex software development and scalable cloud infrastructure. Currently leading the application infrastructure at STM (Superior Tribunal Militar), focusing on modernizing execution environments through containerization, automation, and robust CI/CD strategies.

Expert in orchestrating mission-critical environments using **Kubernetes (RKE2)** and **Rancher**, with a strong emphasis on Infrastructure as Code (IaC) using **Ansible**. My background as a Senior Software Engineer allows me to deeply understand developer needs, enabling me to build highly efficient delivery pipelines and developer-friendly platforms.

Core Expertise:

- **Orchestration & Containers:** Kubernetes (RKE2, EKS, GKE), Rancher, Docker, Docker Compose.
- **CI/CD & Automation:** GitLab Runner, Jenkins, Ansible, Maven, Gradle.
- **Cloud & Observability:** AWS, Google Cloud, OpenTelemetry, Prometheus, Grafana.
- **Security & Quality:** Keycloak (OAuth2/OIDC), SonarQube, Nexus.
- **Data Infrastructure:** Management of SQL (Oracle, PostgreSQL) and NoSQL (MongoDB, Cassandra, Neo4J) environments.

With an MBA in Strategic Management of IT, I combine technical excellence with a leadership mindset, focused on optimizing operational costs (FinOps), improving system reliability (SRE), and fostering a culture of continuous improvement. I am driven by the challenge of transforming complex legacy processes into automated, high-availability cloud-native solutions.

Professional Experience:	**STM (Superior Tribunal Militar) – Lead DevOps Engineer**
Period:	10/2024 to Present
Context:	Strategic leadership of STM's application infrastructure, focusing on the modernization of the execution environment, automation of delivery lifecycles, and fostering a DevOps culture to support mission-critical government systems.
Level of intervention:	Lead DevOps Engineer / Infrastructure Architect
Tasks & Activities:	**Kubernetes Orchestration:** Installation, configuration, and administration of **RKE2 (Government-grade Kubernetes)** clusters, using **Rancher** for centralized management and orchestration of containerized applications. **CI/CD Pipeline Engineering:** Architecting and managing end-to-end pipelines using **GitLab Runner**, integrating automated stages for building, testing, security scanning,

	and seamless deployment. **DevOps Toolchain Management:** Administration of the full development support stack, including **Nexus** (Artifact Repository), **SonarQube** (Code Quality), and **GitLab** (Versioning and Automation). **Observability & Monitoring:** Implementation of a comprehensive observability stack using **OpenTelemetry, Prometheus, and Grafana**, ensuring real-time visibility into service health, traces, and performance metrics. **Infrastructure Governance:** Establishing and maintaining staging and production environments with a strict focus on security hardening, reproducibility, and high availability. **Technical Mentorship:** Providing technical guidance to development teams on modern architectures, performance tuning, and DevOps best practices, acting as the primary link between Development and Operations.
Results:	Successful modernization of the application execution environment through robust containerization and orchestration strategies. Significant improvement in delivery reliability and security by implementing automated quality gates (SAST/DAST) within the CI/CD lifecycle. Reduction in Mean Time to Recovery (MTTR) through the deployment of advanced observability and proactive monitoring dashboards. Consolidation of a DevOps culture within the institution, streamlining the communication between engineering teams and infrastructure operations.
Technologies:	Kubernetes (RKE2), Rancher, GitLab CI/CD, Docker, OpenTelemetry, Prometheus, Grafana, SonarQube, Nexus, Linux, Shell Scripting, Ansible, Microservices Architecture.
Professional Experience:	**STM (Superior Tribunal Militar) – Senior Software Engineer**
Period:	02/2024 to 10/2024
Context:	End-to-end development of the **Ouvidoria STM** project, a strategic web and mobile solution built from scratch to modernize citizen communication and automate internal administrative workflows within the Military Justice system.
Level of intervention:	Senior Full Stack Software Engineer / Technical Lead
Tasks & Activities:	**Architectural Design:** Engineered a scalable backend architecture based on **Spring Boot microservices**, ensuring modularity and long-term maintainability. **Security & Identity:** Implementation of robust authentication and authorization flows using **Keycloak** (OAuth2/OpenID Connect), including integration with social providers (Google/Facebook). **Full Stack Development:** Development of the web frontend using **Angular Standalone Components** and PrimeNG, alongside a cross-platform mobile application using **Ionic Framework** with native feature integration (camera, push notifications, and connectivity).

	System Integration: Orchestration of complex integrations between microservices, including automated document rendering (PDF), email services, and the **SEI (Electronic Information System)** for automatic administrative process opening. **Product Design & Agile:** Active participation in UI/UX prototyping using **Figma** and leading technical deliveries under **Agile methodologies**, ensuring high-quality user experience and alignment with institutional goals.
Results:	Successful delivery of a "Technological Milestone" for the STM, replacing manual processes with a fully automated digital identity and communication platform. Increased institutional efficiency through the seamless integration with the SEI system, reducing the time to open and track administrative cases. Launch of the institution's first modern mobile-first solution for citizens, achieving high standards of usability and security.
Technologies:	Java, Spring Boot, Angular (Standalone), Ionic Framework, Keycloak, PrimeNG, PostgreSQL, REST APIs, SEI Integration, Figma, OAuth2, OpenID Connect, Git
Professional Experience:	**Capgemini – Senior Consultant Engineer**
Period:	09/2022 to 01/2024
Context:	Development and modernization of the **Merchant Portal** for the French financial group **Natixis**. A large-scale international project focused on payment processing and financial management for merchants.
Level of intervention:	Senior Consultant Engineer / Fullstack Architect
Tasks & Activities:	Definition and implementation of the **Frontend Architecture** using **Angular**, integrating the group's Design System to ensure modularity, scalability, and full responsiveness. Architecture redesign of the **Spring Batch** ecosystem, implementing high-performance data ingestion processes using **Multi-threading** and parallel processing resources. Development of robust backend services and **RESTful APIs** using the Spring ecosystem (Boot, Data, Security). Database engineering including the creation and optimization of **SQL DDL and DML** scripts for **Oracle Database**, ensuring data integrity and query performance. Collaboration in an international environment, following Agile methodologies and ensuring alignment between business requirements and technical delivery.
Results:	Successful standardization of the frontend development workflow, reducing UI inconsistencies across the portal. Significant performance gain in data processing (ETL) by optimizing batch jobs with multi-thread execution. Delivery of a stable and secure portal for the European merchant market, meeting strict financial industry compliance standards.

Technologies:	Java, Spring Boot, Spring Batch, Angular, TypeScript, Oracle Database, PL/SQL, RESTful APIs, Git, Maven, Agile (Scrum)
Professional Experience: Ministry of Agriculture, Livestock and Supply, Brazil – Technical Coordinator Data Intelligence Nucleus	
Period:	03/2020 to 08/2022
Context:	Technical Coordinator at the Data Intelligence Nucleus, structure activities to work with data sharing, contracting a cloud service, defining the on-premise data lake environment and analytics engine.
Level of intervention:	Technical Coordinator
Tasks & Activities:	Hands on with AWS cloud technologies, lambda function development in java, performing treatment of apache parquet files for multidimensional model. Made study, and definition of flow and self-service BI tools. Coordinating the technical team and acting directly in the realization of data ingestion PoC with masking, structuring, and documentation of Hadoop environment, using framework's Spark, Hive, Pentaho. Production of panels with Qlik Sense.
Results:	Workflow structuring to enable integration of data from several Brazilian government agencies related to agriculture, in the so-called Agro Cloud.
Technologies:	Java, AWS Lambda, AWS Kinesis, AWS Glue, Pentaho, Hadoop, Hive, Qlik Sense, Oracle Data Integration
Professional Experience: National Supply Company, Brazil – Technical Coordinator of the Nucleus of Architecture and Innovation	
Period:	05/2013 to 02/2020
Context:	Responsible for research and technological innovation, architecture definition and development of corporate micro services.
Level of intervention:	Information Technology Analyst
Tasks & Activities:	Development of Spring boot based microservices in Java and reusable Angular based visual components organized in ngx- libraries. Conducting research and implantation of architecture java based on micro services, using spring framework and the concept of resources server's controlled by Oauth2. Responsible for the research and implantation of proposal of control of distributed transaction of the micro services, based on Spring Atomikos and Kafka. Work with the most common packages and frameworks such as like Spring Boot, Hibernate, JPA, JAX-RS, JSF with good experience in front-end technology Angular (modules, components, services, directives, data-binding, routing). Made archetypes maven contemplating the architectures defined for the Company. Creating reference architecture and reusable components in Angular, organizing a set of ngx-libraries. Carried out strategic planning of technological direction and I provided training for the development teams.
Results:	Improvement in the quality and standardization of the development of solutions and migration from monolithic architecture to one based on microservices, being responsible for the direct development of more than 40 microservices.
Technologies:	Java, Angular, Spring Boot, Spring Data JPA, Spring Security Oauth2, Spring Test, Maven, PostgresSQL, GitLab, Jenkins, Sonarqube, FindBug, Checkstyle, PMD,

	Swagger API Documentation

Professional Experience: CTIS, Brazil – CNPq - Conselho Nacional de Desenvolvimento Científico e Tecnológico

Period:	10/2009 to 04/2013
Context:	Assigned as a Senior Java developer by a Brazilian outsourcing company in an agency linked to the Ministry of Science and Technology.
Level of intervention:	Senior Software Engineer
Tasks & Activities:	Integrating the development team that maintains web solutions for internal and external use. Work as a Senior Developer work with JSF, Struts, JSP, Hibernate, EJB, PL-SQL, Oracle. Implement enterprise application projects, directing requirements definition, development, validation, and ongoing maintenance activities.
Results:	Responsible for finalizing the financial module of the e-fomento scholarship system. Reduction of maintenance tickets in the accountability module, giving more stability to the system.
Technologies:	Java, Spring, Struts, Adobe Flex, JSF, JSP, Action Script, Hibernate, EJB, PL-SQL, Oracle, JUnit

Skills

Skill	Duration (years)	Expertise Level
Kubernetes (RKE2) & Rancher	2	Expert
Docker & Containerization	3	Expert
CI/CD Pipelines (GitLab Runner & Jenkins)	3	Expert
Infrastructure as Code (Terraform & Ansible)	2	Advanced
Cloud Computing (AWS - EC2, VPC, IAM, S3)	3	Advanced
Observability (Prometheus, Grafana, OpenTelemetry)	2	Advanced
Code Quality & Artifacts (SonarQube & Nexus)	5	Advanced
Identity Management (Keycloak & AWS IAM)	3	Advanced
GitOps & Continuous Delivery (ArgoCD)	1	Intermediate
Cloud Native Java (Spring Actuator, Quarkus, Micronaut)	8	Expert
Relational & NoSQL Databases (Oracle, Postgres, MongoDB, Neo4J)	14	Expert
Linux Administration & Networking (BIND9, Shell Script)	5	Advanced

Academic Background

Graduation	Specialization	Institution	Graduation Date
Bachelor of Applied Science (B.A.Sc.)	Information Technology	UCB - Universidade Católica de Brasília	2010
Master of Business Administration (MBA)	Strategic Management in Information Technology	FGV - Fundação Getulio Vargas	2014

Certifications

Certification	Provider	Date
Google Cloud Associate Cloud Engineer	Google Cloud	03/2026
AWS Certified Cloud Practitioner	Amazon Web Services (AWS)	11/2021
AWS Certified Developer – Associate	Amazon Web Services (AWS)	12/2021
SCJP - Sun Certified Java Programmer	Sun Microsystem	09/2009
SCWCD - Sun Certified Web Component Developer	Sun Microsystem	06/2010
OCE EJB - Oracle Certified Expert, Java EE 6 Enterprise JavaBeans Developer Certified Expert	Oracle	08/2011
OCE JPA - Oracle Certified Expert, Java EE 6 Java Persistence API Developer)	Oracle	02/2012
IBM Certified Solution Designer – Object Oriented Analysis and Design, vUML 2	IBM	05/2012
IBM Certified Solution Designer – IBM Rational Unified Process V7.0	IBM	12/2012
